Question 1

Revisit Later

How to Attempt?

Of the given 5 numbers, How many are even?

Write a function that accepts 5 input parameters and returns the count of how many of those 5 are even.

For example,

If the five input parameters are 12, 17, 19, 14, and 115, there are two even numbers 12 and 14. So, the function must return 2.

Similarly,

If the five input parameters are 15, 0, -12, 19, and 28, there are three even numbers 0, -12 and 28. So, the function must return 3.

Observe that zero is also considered an even number.

```
5 int countEvens(int input1,int input2,int input3,int input4,int input5)
6 {
7     // Read only region end
8     int count=0;
9     if(input1%2==0)
10        count++;
11    if(input2%2==0)
12        count++;
13    if(input3%2==0)
14        count++;
15    if(input4%2==0)
16        count++;
17    if(input5%2==0)
18        count++;
19
20    return count;
21
22 }
```
